

Energy Policy Statement

Last Updated: June 2026

State Street undertakes a commitment to make efficient use of energy at its facilities, with the purpose of preserving natural resources, reducing atmospheric emissions and helping to mitigate the effects of climate change.

Management will communicate and promote energy efficiency programs, ensuring that the organization works in accordance with the principles established in this policy statement. These programs and principles are applied across the scope of our ISO 50001:2018 Energy Management System, which encompasses all energy consumption under State Street's control related to maintenance and operations, including lighting, HVAC, and office spaces across our certified locations.

State Street has published and communicated targets relating to energy performance and greenhouse gas emissions in our operations. Management will support efforts to provide information and resources to achieve these targets.

State Street seeks to continuously monitor and improve the use of energy resources at its facilities and during its activities throughout their entire life cycle, optimizing the technology and design of processes as well as the operation of its facilities, and supporting the purchase of clean and green energy-efficient products and services.

State Street commits to satisfy applicable legal requirements related to energy efficiency and the use and consumption of energy. State Street supports design activities that consider energy performance improvement and reduction in carbon emissions.

State Street will provide stakeholders with reliable and transparent information on progress against our objectives in our annual sustainability report.
